In this software tutorial, we'll show you how to use the design tools in Adobe Illustrator to customize objects in the workspace. We'll also explain how to create custom shapes, add text and create an object with multiple layers. Learn how

---

to use the Pen tool to draw lines and the pathfinder tool to navigate a path. To save time and create patterns, we'll explain how to apply masking. As you can see in the Preview Image below, we have already created some simple shapes and placed them on the board. Using Illustrator, we can change the size of the selected object, apply fill and stroke colors and change the opacity of each

---

layer. Next, we can use the shape tool, as you see in the third image below, to draw lines and create shapes. In this example, we have created a triangle by using the Shape tool and selecting the Pencil tool. The next image shows the font style option, where you can easily change from one font to another. In this tutorial, we will show you how to insert the Adobe® XD application in

---

Illustrator and edit the objects you have created in order to create more complex 3D models. The first step, shown below, is to create a new document for working on XD. Next, we create the vehicles with the shapes above. We can resize and rotate the objects and even add objects such as people or vehicles. Now, we zoom to the part of the board where we have placed vehicles

---

in our board. If we want to get a different view of the board, we can change the view. Using the Preset menu, we can easily choose which objects are defined and create a new layer. Now, we can color the objects and erase the unwanted parts.

The next few images demonstrate how we can import the coordinates of a custom shape. Next, we create a new shape and change the opacity of

---

some objects. We can change the size of the shape object, and that's about it. Next, we create an explosion effect. The horizontal line serves to determine the shape. Now we can use the Pen tool to create lines and shapes. We can use the pathfinder tool to navigate a path. We can use the shape tool to create a new shape. Next, we can use the component tool to add some components in this

---

image. Next, we can place some text and add an image.
