*** ## The Adobe Photoshop Architecture Photoshop is a complex program that consists of three main components that interact with each other: * The **Application** component is responsible for the interface. A professional image developer should be able to create an image for a client without needing to know the various quirks and failings of each type of computer. These three main components work together as a collection of algorithms that support the editing process. These features are often confusing, and if one is not familiar with the program's inner workings,
