Learn more about Photoshop with the AIGA Academy's Photoshop reference guide High-Level Features Photoshop allows graphic designers to manipulate the individual pixels in an image to create a new version, or "copy." A copy can also be moved and resized, and layers can be copied and pasted. Photoshop also includes a number of tools that are used to help the designer to produce the desired look and feel. These include tools that are commonly used to manipulate photos, such as the clone stamp,

brush, eraser, and lasso tools. Photoshop has tools to help create special effects such as liquify, filters, transitions, and effects. The features that are built into Photoshop have been improved over the years, including adding layers, importing and exporting, spot healing tools, and the ability to change the number of layers, for example. New features have also been added on a regular basis since Photoshop was first released. For example, a better search and replace feature was added in version 5, and automatic alignment of layers was added in Photoshop 7. Learn more

about Photoshop's benefits with this guide from AIGA Web-Sized Environment Photoshop has the ability to resize raster graphics files to a variety of different file sizes, with the ability to create and print different file types. It can also be used on the web and for documents that can be viewed and printed in a Web browser. Photoshop's flexibility and power also make it very difficult to learn to use. The program can be a large learning curve, and the design team at AIGA recommends that beginners use a free trial version of Photoshop, or alternatively, a web-based tutorial or

review of the program, to begin to learn the basics. Photoshop Resources

If you are looking for the best app for creating images, Adobe Photoshop® is one of the best options. It is able to transform photos into high quality artworks. It is not a graphic design program like Adobe Illustrator or Adobe InDesign but it is great for enhancing images. Photoshop allows you to crop, rotate, resize, place text

and more. Adobe Photoshop has many tools to help you to get high quality photos or retouch/edit images. But the most useful features are the Crop tool and the Gradient tool. The Crop tool lets you resize and rotate pictures. With the Gradient tool, you can create different types of backgrounds, patterns and many other things. Adobe Photoshop has a variety of keyboard shortcuts that can be used in numerous ways to increase your productivity. For the amateur Photoshop user, here are the following things that you can do with Photoshop: Using Photoshop for image editing Crop tool: Using

Photoshop's Crop tool, you can resize images and resize them in any way you want. You can change the size of the cropped image in the Crop tool. There are five crop presets to choose from: Crop, Rotate, Flip, Panorama and Scale. Basic Crop tool Advanced Crop tool Using the Crop tool, you can also crop specific areas of the image without removing other areas and without changing the overall size of the image. Rotate tool: The second most important tool in Photoshop is the Rotate tool. With the Rotate tool, you can choose and change the angle of your photos. There are different

types of tools to rotate the image:
With the Rotate tool you have the ability to rotate an image: left, right, top, bottom, and front. Basic Rotate tool Advanced Rotate tool Using the Rotate tool, you can rotate your image in one of these directions: Rotate 90 degrees counterclockwise. Rotate 180 degrees clockwise. Rotate 180 degrees clockwise. Rotate 270 degrees counterclockwise. Move tool: The Move tool allows you to move an area from one location to another. The tool can be used to move an 05a79cecff

K-State Museum and the Undergraduate Learning Resources (ULR) Institute are launching a new master's degree in museum studies. Beginning January 2017, students in the Civil War and Trans-Mississippi Territories period of American history will be able to earn their academic degrees in the museum studies department. Several new degrees will also launch in fall 2017, including a new bachelor's degree in museum education and a masters degree in history, both of which will be

accredited through the Arkansas Commission on Colleges and Department of Higher Education. The first K-State Museum course in the new degree program will be Museum Studies and Research Methods. Museum Studies is the study of museums and how they work to preserve and disseminate information and artifacts. It explores the field of museum studies and the academic research surrounding museums. A Masters of Arts in Museum Studies will be offered starting in January 2017. The curriculum will be a combination of online and in-person

courses. It will include course work to prepare students for their professional career as museum professionals, as well as courses to explore their interest in collecting, conserving or exhibiting historic artifacts. K-State will provide a free scholarship. A new bachelor's degree in Museum Education will launch in fall 2017. This course will equip students with the knowledge and skills necessary to be effective educators. K-State will offer a free scholarship to students in the degree program. Both degrees will be approved through the Arkansas Commission on Colleges and the

Department of Higher Education. Additionally, K-State will award its own degrees in the new programs. The new master's degree will provide graduate students with the opportunity to earn credit for their K-State bachelor's degree. Additional information on these new degree programs will be posted as it becomes available. About the Undergraduate Learning Resources Institute The Undergraduate Learning Resources (ULR) Institute works closely with K-State departments to provide undergraduate students with personalized service and guidance for

curriculum planning and access to education resources. The K-State Foundation provides funding for many ULR resources. For more information, visit [About the K-State Museum and Undergraduate Learning Resources](#)

What's New In?

× Expand (Photo by Jim Ruymen/UPI) Members of the U.S. Army Corps of Engineers survey the Lower Mississippi River to see what kind of levee could be built. NEW ORLEANS – The Army Corps of Engineers announced this week that construction of a levee wall to protect New Orleans from a potential breach has been delayed by nearly four years. At issue is the best construction approach for the approximately \$9 billion project, which will require digging a 33-foot-wide trench approximately three miles wide, 1,800 feet long and up to 13 feet deep. The

levee will prevent flood waters from inundating the New Orleans area should it be breached, and is part of a strategy to prevent similar flood disasters in the future. But structural problems in the levee have caused the Corps to turn to a different approach to build the levee, requiring the digging of trenches wider than originally anticipated. The \$1.3 billion project is now scheduled to be completed in 2024 instead of 2031, the Corps said in a news release. The delay comes on the heels of Hurricane Barry, which hit New Orleans in September as a Category 2 hurricane

and as a Category 1 hurricane on its northward trek through the Gulf of Mexico. The storm caused \$1.6 billion in damage to the city, including the destruction of six pumping stations that are integral to keeping the New Orleans region dry in the event of a breach. The Corps' Natural Resources Division's St. Bernard Levee District said in its fiscal year 2020 report that the \$1.3 billion levee project will protect 97 percent of the city's area. "This site is the cornerstone of the larger Lower Mississippi River Valley Levee System," Corps said in the news release. "We are responsible for

maintaining this vital flood-control infrastructure and maintaining its protective character. Our levee system protects the communities of greater New Orleans from the challenges of flooding.” The New Orleans Levee District, a local government organization that oversees drainage, spent more than \$400 million in its fiscal year 2019 to repair and rebuild the city’s flood walls and pumping stations. By the end of this year, the levee district plans to complete repair work on more than 55 miles of flood protection levees. It also plans to have less than a 10-percent flood protection

deficit to get back to the 70-percent
reduction
