Delphi 2010 Serial Port Component Free

Mar 11, 2020 I searched but I didn't find any components for serial port access. My goal is to write something like this in Delphi 10.2: var Command : string = ReadStringFromComPort('COM1', '', #8) ; My idea was to do something like this: function ReadStringFromComPort(PortName: string; Buffer: string; BufferSize: cardinal; dwStopBuf:DWORD=0): string; var Handle, Buf: Integer; Buffer1, Buffer2: array of String; Buffer3: string; begin Handle:=CreateFile(PChar(PortName), GENERIC_READ, FILE_SHARE_READ, nil, OPEN_EXISTING, FILE_ATTRIBUTE_NORMAL, 0); if Handle INVALID_HANDLE_VALUE then begin Buf:=GetCommState(Handle, nil); (SF+) Buffer1:=Buffer; (SF+) Buffer2:=Buf; Buffer3:=Buffer; SetCommState(Handle, Buf); (SF-) Result:=Buffer3; CloseHandle(Handle); end else begin (SF+)Result:=Buffer; end; end; I have some doubts: Is it possible? Is it dangerous in principle? Is possible to add information about port parameters? For example I would like to set the port parameters to 115200 but the port doesn't support, or I would like to write or read binary data in this case? A: Actually this is a very poor implementation of the SerialPort class from .NET. Btw, for Turbo Pascal Pascal, I would suggest going for the Native Communications Library (NCL), which is a fully cross-platform solution with code for Delphi, C++Builder, Lazarus and others. Maybe this code can be of help: SerialPort.pas, High-Resolution NMR Spectroscopy of Pseudomonas aeruginosa Oxidizing Trimethylamine N-oxide (TMAO): 2H-1H Correlation Spectra of Oxidized Trimethylamine. 1H spin-spin and spin-spin coupling nuclear 3da54e8ca3
