Q: Getting intersection of multiple request I'm currently working on a multi node replicated system and by doing research I found out that now data will be transmitted across multiple nodes (read-write). Because of that I need to search for more efficient ways of transmitting data than the network. One of the methods for doing this is to use a finite state machine but because of this I'm not able to transfer the data efficiently. For example let's assume I have nodeA and nodeB and they are replicating data to each other for the sake of this example. If nodeA needs to know what nodeB has written to then I have to send nodeB this information. However if nodeA needs to know what nodeB has not written yet, then I need to go back to nodeB and send the nodeB a request. I'm not sure how you can make the load balance here as all requests and responses are in different nodes. Any help is appreciated. A: There are several ways of doing this. The architecture isn't really the main focus of the question, but it is the primary way to implement replication (or sharding, if you like). If you have a detailed question in mind then someone could help with an answer, but at a high level, how you could do it is as follows: Let's have a 2 node cluster with a shared database. Node 1 is the leader and node 2 is the follower. The leader node has a view of all data, updates its view, and logs all updates to a journal. The journal is a special table on the database. The leader maintains the journal's consistency by searching it, which is a slow operation. The follower node read its view of the leader's view from its journal, and replicates from the leader. Then the follower starts the journal. The follower doesn't always replicate from the leader, but rather uses it's view. The follower is interested in updates from the leader, but it will do it's own updates if there are changes on the node. The main thing to understand here is the journal. It's basically a log of the changes, and both nodes keep the journal's consistency. The leader's query to search its journal will return all changes made since the last time it queried. An alternative way to implement this is to have the database be a multi-master (eg. four nodes in total with the leader

Weighing in on the subject of cinematic failure, I watched Moonrise Kingdom again for the umpteenth time this week, trying to remember my initial reaction to the film and trying to divine whether I had seen it before "getting it". I was doing the hard part first, because it is really easy to be complacent about the film. It was a pleasant enough rom-com, pleasant enough to watch, pleasant enough that I have seen it a thousand times before. It just worked. The problem was, the first time I saw it, I thought it was awful. The second time I saw it, I thought it was so bad I wondered if I had made it up. The film is about a young couple, a boy and a girl, who live on the island where the boy was born. It is a sparse idyll, the director and his lead actor and writer pretending that none of the problems of relationships were ever mentioned. The boy and girl, played by Jared Haibon and Selena Gomez, couldn't be more obviously in love. They are innocent in the way that they meet, in the way that they slow dance at a dance club, in the way that they are courteous with each other and themselves. They have a home, it is shown over and over again. It is a little lighthouse that looks out over the sea. They have a way of speaking to each other, a way of going to sleep together every night, a way of being in the world together. They also fight, and sometimes they are like the cartoon fighting cats who can only cause each other just so much damage. The word I kept thinking was accident. The film fails to get that they are both 15, and the fact that what the boy does seems to be the absolutely right thing for any 15 year old, and that the boy lives in the way that he wants to, and the girl lives in the way that she wants to, can only be accidents of a lifetime. They are the luckiest 15-year-old teenagers in the entire history of humanity. We learn all about them over the course of an hour and a half, but we only see them interact once or twice. The film takes the bigger picture for granted. As a rom-com, Moonrise Kingdom is a bit of a buzzsaw. Everything has to be kept within its place, and it is kept in the place even when it should be allowed to fly off
