Adobe has described Photoshop as: If you've ever taken a photograph, edited it, applied special effects, or added objects, you've used Photoshop. Now that Photoshop is a well-known company with a well-known brand, some of its terminology can be confusing. So what are all of the meanings of "photoshop"? Use Photoshop to open, modify, or manipulate images. You can use Photoshop to replace colors, create new images, or turn photos into posters. A shape-based tool used to set the look and appearance of an image. An advanced form of digital manipulation for changing an image in ways that computer processing can't. A form of image and video editing for the Internet and other Web media. A photoshopped image? A photoshopped image is an image that has undergone extensive manipulation or alterations using a digital image editor. It's also known as digital retouching or editing. We've heard it used as a negative description, such as "that guy is a real photoshopper" or "that guy is a photoshopper because he just photoshopped her head onto the body." We've seen its use as a positive description, such as a news article that highlights that an artist who has gone with the title "artist" has not. It's also used as a term of honor to call attention to someone who has gone through the process of digital photoshopping to alter their image. In the early days of digital technology, digital photoshopping was used to create artwork such as posters. It's the process of adding over 30 years of exposure to the use of digital technology to make images, including photos, look more professional or sophisticated. Photoshop can do so much more than merely alter or retouch a photo. It can retouch entire videos, transform a painting, use 3D tools, photo manipulations, sound enhancements, and more. Pixar was the first to create a film made entirely with a digital process, and still has a great amount of photoshopping in its films. Within the last decade, filmmakers have been combining digital techniques and photoshopping in great forms of expression. Most importantly, photoshopping is now something more than the creation of images that look more flawless, it's part of our everyday lives. It's part of our current day and age and the Internet

Author Topic: Find the Limits of Answering Questions (Read 6719 times) ok so this is me attacking my own idea...I've got a game that I'm kind of stuck on. For a story based game the thing I've created is the first part of a trilogy. I've wanted to make this game for years, the reason I'm stuck on it is because I don't know what the next part of the story would be. So my question is this: The player starts a new game and goes through level 1 and level 2, then you start at level 3. When I get to the part where you have to pay to get the next quest I want to create a mechanic where the player is able to buy some kind of protection or maybe even decide who you will sell yourself to in order to get to level 5. Does this make sense? I'm stuck on where I should put the buyable quests. Someone said that if you have to pay to get something and it's the final part of the story, shouldn't it be at the end so that if the person is quitting, it's still there. I don't know what kind of gamer you are, but I would hate to go back and try to see what I missed when I knew the final quest would be there. I'm really excited about your game, and am sure it will be a big hit. it's a story based game, not one of those "kill the hoarder" type games. I can't imagine playing through a horde of orange men and having to go to level 5 to stop them. so my idea was to present the idea of what happens when you pay the cartel to get in. it's a story based game, not one of those "kill the hoarder" type games. I can't imagine playing through a horde of orange men and having to go to level 5 to stop them. so my idea was to present the idea of what happens when you pay the cartel to get in. I'm sorry, it's just that when I read the OP I was thinking of what I would do to get to level 3 rather than what I would do to get to level 5. two dates, each day of the week. If the date is changed, I want to subtract the old from the new (only days), and if the date was

can't figure out how to subtract the 2 dates? I've been looking at the DateTime type for a while and I'm just not getting
anywhere. A: I will build a table that can hold any day of the week. If the current date is represented by the primary key of the
table, then I will order the results by days until the current date. Then for any day n, I will check if the corresponding date of the
start date is smaller than the current day. If it is, I will subtract the current day from n. If it is not, I will keep the value n. For
your example, it would be: +-----+-----+-----+-----+ | Date | Day | Date | Value |
