It starts off in the RAW (or raw) file format, which preserves the image file's original data so you can make an unlimited number of changes to it. For any raw file, you can choose how you want to view the image. One of the main functions of Camera Raw is to enhance your images by adding color and contrast. Other creative features include sharpening, equalizing color, adjusting exposure, correcting white balance, and eliminating lens distortion. If you want to see where you can edit your image, you can work with an image preview window, also known as a **Quick Look,** which renders the image in an instant so you can get an idea of the changes you'll make to the image. You can make minor adjustments in the Quick Look, but large changes can be made to the RAW file by using the entire Camera Raw interface.

Want to get your brushes and pens organised? Try GIMP. An alternative, faster version of Photoshop. Create a new folder called Brushes, or select Go > Customize > Brushes. You can drag-and-drop PNG or JPEG files into the Brush window. File types or extension don't matter. Or you can import a Brushes.png file created by GIMP, a free vector graphics program. (That one will be covered in a separate Guide to GIMP, coming soon.) In the Brush window you'll see a preview window showing your new brush. Just move the mouse cursor over the preview and you'll see a preview of the brush (right): Click the right mouse button on the preview. This will pop up the Brush Options dialog window (left), where you can set things like the brush size, hardness, and opacity. Create a new image. There's no need to save. With the Brush Options dialog window still open, drag the brush onto the image. This will be the brush you'll use to paint. Notice the Brush Options dialog box stayed open, and you see a small box (left) at the bottom of the Brush window. You can move this box (by clicking it and dragging it to a more convenient location) by dragging the Brush window around the screen. By default it's in the upper left corner, but it doesn't need to be there; it can be at any position on the screen. When you're done, click anywhere outside the Brush window. That's the brush you'll use for painting. To get back to the Brush Options dialog box, just open it again by clicking the down-pointing arrow in the upper left of the Brush window. You can also change the brush size, opacity and hardness by clicking the middle-pointed arrow in the Brush Options dialog box. You can change how the brush applies by clicking the up-pointing arrow in the Brush Options dialog box. This will give you a box (left) with a menu of options. Just choose the option you like best. Press your Ctrl + Z, or Command + Z, on a Mac, to undo your changes. You can easily create a duplicate brush: In the Brush Options dialog box, click the

Former Mexican President Vicente Fox finally weighed in on Donald Trump's absurd immigration ban, accusing the GOP front-runner of having "white supremacy" in his blood. Mr Fox wrote in his weekly column on newspaper Milenio: "Racism is all over Donald Trump's version of the wall, where Mexicans are not welcome." The former president said Mr Trump's views echoed those of his father, former President George W Bush. "I find it ironic that someone who talks like that when he was president of the USA," wrote Mr Fox. Mr Fox went on to note his worries about the migrant caravan that was forming in Mexico in a bid to reach the US southern border: "What would Trump do as president of the USA? He would let thousands die? I think not," he wrote.
