Just Adventure is a Side-Scrolling, episodic, horror, psychological murder mystery. Each episode is presented in a point and click interface and tells the story of the game's main character, Amanda, and the five guests who are staying at the hotel. The hotel staff comments suggest she is acting strangely, however it is never explicitly stated that she is, or even might be, a murderer. The guests are introduced, each having their own back-story and motives, as the narrative unfolds. After each guest is found murdered, Amanda is seen in a series of flashbacks. For each flashback, the player is able to choose the path that Amanda takes, as well as view several possible endings. Only after the third guest is killed, a murderer is revealed; yet another flashback reveals the identity of the killer. Between flashbacks, the player is able to take control of Amanda, to talk with other characters, or to move from room to room. Selecting dialogue options, and returning to earlier rooms, will often uncover the identity of a suspect. In the first episode, the player gets to know Amanda, who is a young American student visiting her uncle in the small town of Wetherford, to attend the funeral of her mother. The second episode is a prequel to the first episode, and showcases the brief romance between Amanda and the hotel manager's nephew, Richie. The third episode begins at the hotel, and reveals the murder of a guest, and the subsequent actions of the staff. Development Just Adventure is the first title in the Well-Known Hotel series, which is part of the Dan Poynter series of independent games. The game was founded by Dan Poynter, whose previous games include the popular Unfortunate Ransom and Psoas, an award-winning physics-based action puzzle game. He also published the bestselling in the German language (a translation of the Psoas into German) entitled "Das steckt eine Mörder im Keller". Just Adventure was initially going to be a text-based game rather than a point-and-click, due to the developer's desire to avoid the early issue of a very simple interface that would have proven unintuitive for the target audience. The game has since been ported to the iPhone and iPod Touch and include various other enhancements. Release Just Adventure was initially released on April 24, 2008, and is available for a variety of devices including: PlayStation Portable c9d1549cdd

The game is set in the historical 17th century, a time when witch trials were held and executed. Lynn lives in the small village of Devil's Rock, accompanied by a witch and her familiar, a cat. Lynn is a 16-year-old descendant of Countess Elizabeth's family. Her mother, Agnes, is a painter. Lynn has an older sister, Madeline. Lynn's grandmother, Helena, is a witch. Helena is also Elizabeth's aunt, and as such, has some intimate knowledge of the evil plans that the Witch Queen, Elizabeth, has in store for the world. Lynn is kidnapped by Elizabeth, who wants her killed. Elizabeth sends her sister with a messenger to Lynn's grandmother Helena, Helena's friend/secretary Marie, and Marie's young assistant, Peter. Marie was sent to Helena by her niece Elizabeth to kill Lynn. Lynn is saved when Lynn's grandmother discovers Helena's treasure map that tells the player where to find Lynn. After finding Lynn, Helena is captured by Elizabeth and held as hostage. The player will have to guide Lynn through the castle and, of course, solve some puzzles. Lynn must find several items hidden in the scenes, and find a notebook that has a secret code written inside of it. This is an important part of the game, as it will allow the player to use a specific function of Elizabeth's stolen magic staff. Find and acquire/interact with over 50 items, including a scroll, a staff, a ring, a mask, a magic locket, and a magician's cape. Different items are required to solve the game's puzzles. Also, Lynn can speak to any character in a room if there is nothing blocking her way. Masks and masks: There are 9 masks in the game, and in order to find out where they are hidden, the player must explore 3 rooms. Each mask has its own special location in the game, where it can be found. Not all of them can be found in all 3 rooms. Once all of the masks are found and used in the game, Elizabeth's mask will be displayed on the screen. The player can only move the character on the map, with the help of the witch. You will encounter 3 different masks at different places: Lynn's mother, Helena, and Elizabeth. The staff/magic locket: The item is necessary to unlock the third part of the game. It is a key to the door to

for Infinite (Notes from the Apocalypse) InversedRat - NIN Live in London Multi-track recordings from InversedRat. Without any bit of explanation, that's all you get from this individual. I would say to people who are familiar with his album "Tapeworm Vibration", that they should appreciate this even more as a sextet performance. This is a very different type of InversedRat from what has precede Sixty-six million years ago, tornadoes tore swaths of the earth's surface. One of these conical ridges trapped mud and water and evolved into a body of sedimentary rock located in a region on Earth known as the Cretaceous-Tertiary (CT) boundary. Over time, this vast layering of rock became metamorphosed and the mass was gradually compressed—making it into rock we call shale. Researchers have found this fossil, named "Cowisius," at a site in Camarillo, California, near Los Angeles. It's one of only six such "diamonds" ever found. Other materials included two living deer "antlers," which had recently shed—which is how we know about them. They're remarkably similar to antlers found just north of the dinosaur tracks in the same section, as well as a piece of red rock with patches of white that's soft enough for car keys to cut right through it. Something about the way it doesn't match anything nearby turns out to be significant too. CT boundary rock is younger than but similar to the common rock seen all over the area, suggesting this place existed in isolation and was not cut by a tectonic plate boundary like Earth's other ones. The rocks made everything a lot more interesting. Continuing with the story, the site itself appears to be what geologists call a "dinosaur footprint deposit." Careful examination allowed researchers to identify five different types of large, semi-plantigrade dinosaur tracks—made by a group of large dinosaur called a sauropod. The tracks vary in their degree of preservation. Dinosaur tracks in the true "dinosaur town" sites of Montana are even more fully detailed, with eye-shaped depressions for the eyes, notches and grooves for to help distinguish between left and right. The tracks on Cowisius show more

First off, I'd like to thank Inafonix for all of their hard work on MP-27M. The MR-27M "Thunderbol" is a great weapon. It's fast, accurate, has a great rate of fire, great power, and it's great looking. However, the problem is that compared to players with Tavor, the MR-27M doesn't really do anything to help its effectiveness. The main problem is that it's hard to feel like you're at any kind of disadvantage when you pull your MR-27M out. While I don't doubt the MR-27M's accuracy, one of its best features is its rate of fire. While the MR-27M doesn't break down its ammunition like the Tavor, the MP-27M does not really have an effective way of replacing ammunition. Let's break down the MR-27M for it's features: -It has a shorter barrel than the Tavor and can cause problems for a player using a Magpul UBR. -The MR-27M's barrel is solid, but it's too short for a long distance shot, so it'll immediately start to break down. The Tavor has a 40% RPM rate of fire, while the MR-27M has a 35% RPM rate of fire. The Tavor's barrel is slightly larger and is better suited for long
