Autocad offers many extensions to work with the product. Every Autocad license has a license key. The user license can be refreshed by changing the Autocad License key as shown in the above image. The licenses are standard across all products of Autodesk. If a user is using multiple licenses at the same

time, the software shows the user activation as shown below image. License types Autocad offers two types of licenses. The most common one is the personal license that enables a user to use the product for a certain period of time. The other license is the corporate license. Autocad corporate license enables the user to work on projects that are being created by the corporation. Autocad partner solutions Autocad partner solutions are other ways to integrate Autocad into other programs and websites. Re-done extensions Re-done extensions are extensions that have been redesigned to be compatible with the newer versions of Autocad. Macros Macros are built-in applications that work within

Autocad to perform a specific task. For example, if a user wants to build a building and then automatically build a road in it, the user could write a macro. These macros are stored in the "Themes/Macros" folder and can be easily accessed by the users. Macros are a convenient way to work quickly with Autocad. For example, here are a few macros that can be used within Autocad: Switch to first viewpoint on a drawing. Switch to first layer. These are just a few of the macros that can be used in Autocad. There are thousands of macros in Autocad. See also SketchUp AutoCAD Comparison of CAD editors for CAE References External links Autocad Category:Computer-aided design Category:
