The most advanced automatic playout system on the planet.. . Playout is an advance radio automation software that will inspire you with its feature. By analyzing the massive data associated with the keyword Broadcast Play Automation Playout. Can anyone help me figure out what is not working here. If I don't use the cook radio playout the preview works for the radio shows but when I use the radio player I get no video. I still get the audio but it is so messed up. I have tried different players and re-encoding but nothing is working. I am running all on a server. I have attached some screenshots of my desktop. I am trying to get this to work for a couple of days now. Thank you for any help. I am running Linux mint A: I was able to fix this by using the adobe flash player. I had to download the player. If you are using chrome try to download the pepper flash player. I am not sure if this will work though it's worth a shot. I use playout to play radio, it's a very easy and simple program. Q: How to remove sensitive data from Firestore? I have a collection called userprofile that stores all the data about the users. This data is in the form of userid, name and bio. I've also another collection called users that contains all the data about users that can be viewed by anyone. This data is in the form of userid, username and email. Now when my app tries to display the usernames of users to a webview, the sensitive data of username is still there even after c6a93da74d
