I'm looking for a way to do this by selecting the region of the file and not the entire file. A: I tried to apply what you said:

```
import bz2 for f in ["office 2010.bz2", "yazbuk.bz2", "travel 2010.bz2"]: tmp = f.rsplit("office 2010.bz2", 1)[-1] print("Getting the file {} and extracting part {}".format(f, tmp)) with bz2.open(f, "rb") as fh: data = fh.read() head, tail = data.partition(tmp) data = head + tail print("Done.")
```

Which gives

me: Getting the file office
2010.bz2 and extracting
part d1c7fe01c7867b53b3
0ced57ce618bb3 Done.
Getting the file yazbuk.bz2
and extracting part 337
Done. Getting the file
travel 2010.bz2 and
extracting part 25f10d0bd
7ae6e638ee92954f097f2c
d Done. Even though the
partitioning is correct, the
final output is a string with
the first part of the path, in
this case the name of the
file. If you want to add that
part to the filename just
do: import bz2 for f in
["office 2010.bz2",
"yazbuk.bz2", "travel

```
2010.bz2"]: tmp =
f.rsplit("office 2010.bz2",
1)[-1] print("Getting the
file {} and extracting part
{}".format(f, tmp)) with
bz2.open(f, "rb") as fh:
data = fh.read() head, tail
= data.partition(tmp) data
= head + tail
print("Done.")
os.rename("{}-part{}".
